

Dynamic Non-Invasive Tree Cable

Made in Germany

- Adheres to ANSI A300 standard, CE certified
- UV-protected, adjustable
- Shock-absorbing
- Invented by arborists, designed by aero-engineers
- Simple to install, easy to learn
- Non-metallic, nonconductive, non-reflective
- Lightweight (average system under 8 lb)
- Consistent tensile strength throughout—no weak links!
- Requires no drilling of healthy wood

Arborists are the link between healthy trees and the people and structures that surround them. Under most circumstances, proper care, pruning, and management allow the world of trees to interface without objection into our societies and life styles. However, some trees—whether due to poor care, poor form, uncontrollable circumstances or often a blend of all three—need supplemental support.

Trees constantly resist wind and gravity. Other tree care practices are aimed to work with the tree in this constant struggle. So should your cabling systems. Living trees build their own defense against stress by piling wood fiber onto vulnerable areas. Artificially overstiffening such areas can cause growing trees to curtail these natural defenses.

Although several reasons exist for cabling, two primary reasons are of greatest concern to arborists: Repairing damage after failure and installing supplemental support to avoid failure. The latter issue is what inspired the development of dynamic cabling systems.

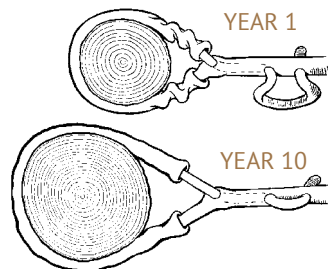

Cobra® systems allow trees to continue their path of self-support while providing a supplemental solution in times of greatest stress. In short, the best cabling systems allow the tree to bend or sway—but not past the point of failure.

The dynamic, low-tension support of Cobra systems is designed to work with the tree's natural and growing defenses, unlike certain static installations that have no "give" and become a crutch.

Certainly some trees will require very static, very limiting support systems. However, many do not. Furthermore, the non-invasive nature of Cobra systems lends itself to trees with poor compartmentalization and/or internal structural issues. No holes are required, and the cable around the stems can be adjusted.

In the end, as arborists we are called on to care for trees and do the smallest amount of harm while mitigating the hazards of wind and gravity. Cobra is a key tool in the arsenal to accomplish that goal.

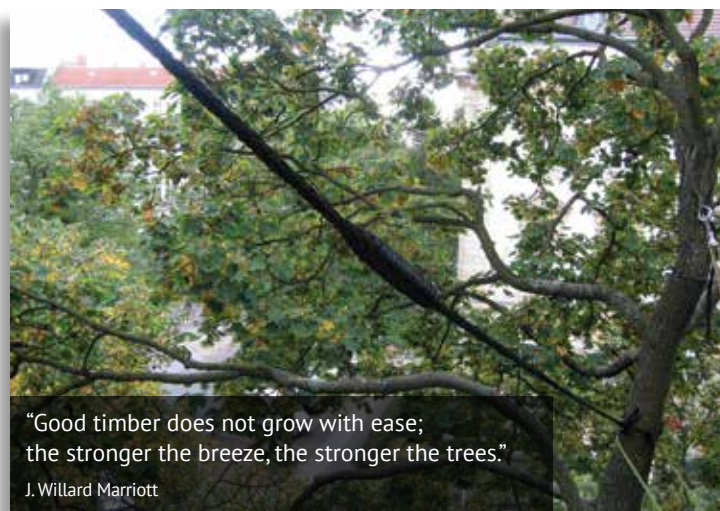

Learn more about tree cabling by joining your regional chapter of the International Society of Arboriculture (ISA), or, for more information on Cobra, look SHERRILLtree.com up on the Web and search the words "Cobra tree cabling".

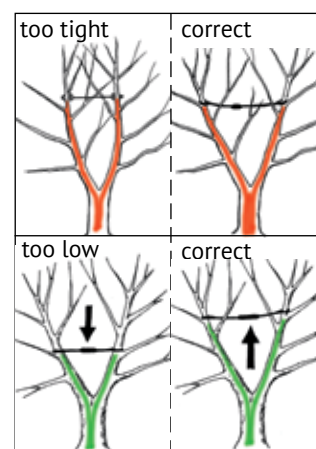

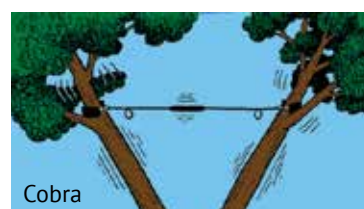

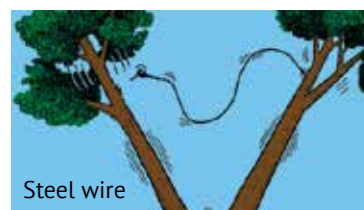

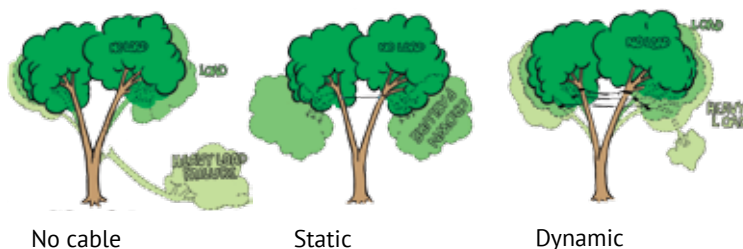

As the tree grows in diameter, Cobra® adjusts to avoid girdling while having no effect on the system's overall length. If the system comes under moderate tension, adjustment will take effect during wind oscillation.

Non-invasive cabling systems cradle branches and stems to provide gentle, dynamic support during inclement weather.

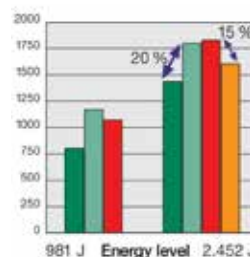

Check out the new Cobra® tutorial video now on SHERRILLtree.com!

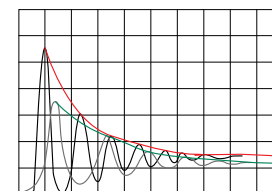

Cobra® is ideal as supplemental support for vigorous-growing codominant stems with sound crotches. Unlike invasive static solutions, Cobra® reduces the karate effect associated with leggy branches flopping against restraint in gusting winds.

Dynamic systems must be installed without tension to provide shock absorbtancy when needed most. ANSI A300 states that cabling be installed 2/3 the distance between the targeted crotch and limb's tip.

German engineers illustrate that providing elastic restraint before excessive movement can control even large stems.

The bending motion of trees in high wind proves that static wires are poorly compatible with flexible green wood.

Cobra Cases	mini	standard	plus 2t	
proper application	for branches/stems up to 6 inch diameter at crotch	for branches/stems up to 12 inch diameter at crotch	for branches/stems up to 16 inches diameter at crotch

TOP RATED ★★★★★

Cobra® Systems

Think back for a moment to the first time you "really paid attention" to a mature tree flailing in strong, gusting wind. Were you not shocked at the amount of movement and how all parts were acting independently to discharge the force? This is why Cobra was designed, not simply to hold two parts of a tree together on a calm sunny day, but to keep those parts from reaching their failure point when whipped and twisted by mother nature.

Each case of Cobra comes with the following items:

- Cobra rope
- anti-abrasion hose
- expansion inserts
- shock absorbers
- end caps (color coded to the year)
- torch

See charts on this page for the specific list of Cobra items in each case.

STEEL CABLING

Seven-strand, left-hand lay, corrosion-resistant, utility-grade steel cable has long been the staple of tree cabling in the U.S. A process first practiced in the early 1900's, this method of cabling remains largely unchanged from its original format. Steel cabling is performed within tree canopies as a method of securing tree parts to one another as supplemental support to resist ice loads and wind forces, yet can provide no guarantee to save, hold together or especially reverse defective growing trends for the tree.

Common-grade cable is malleable so that it can be spliced by hand (self-wrapped around a thimble) while extra-high-strength cable (EHS) is stronger but significantly stiffer and cannot be hand-spliced. EHS is required when utilizing Rigguy wire stops. For all such connections, it is imperative that a heavy-duty thimble is used in all eye splices to reduce the chance of abrasion failure.

For anchoring cable ends, we recommend eye bolts installed completely through the target branch with a washer under the nut. Some companies have abandoned use of J-lags altogether due to their minimal holding power, especially in potentially hollow limbs.

Although many arborists believe that static cabling systems are the answer to all structural flaws requiring supplemental support, we would encourage practitioners to closely examine the long-term goals the customer anticipates for any cable installation and learn more about dynamic options. In other words, are customers informed that artificial restraint requires periodic inspection (as described by the ANSI A300 Annex C "Supplimental Support Systems Inspection Process")?

Extra High Strength Cable

7-strand, Left Hand Lay (cannot be hand spliced)

Galvanized

28499	\$52 ²⁵	3/16" dia., 250', 3,900 lbs. tensile

Average holding capacity of J-lags in solid green wood (based on 1936 study):
3/8" = 1,480 lbs., 1/2" = 2,550 lbs., 5/8" = 4,200 lbs.
J-lags should not be used in hollow limbs or stems.

Lag Spinner

Lag-spinning wrench makes turning difficult lags easy.

15016	\$23 ⁹⁵	Lag Spinner
-------	--------------------	-------------

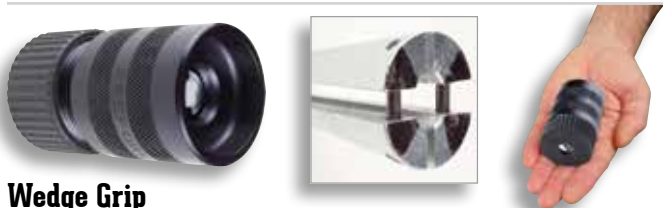

Courtesy Tom Smiley, Bartlett Tree Lab

Why use wire stops?

- Strong & secure
- Lightweight & compact
- Eliminates j-lags, eye bolts & thimbles
- Simple to install, easy to learn
- Allows cabling between very close stems
- Consistent tensile strength throughout
- Needs hole only 1/16" larger than cable

This unique cable termination simplifies the installation process for 7-strand EHS cables by eliminating the need for lags and bolts. Simply drill through the tree, feed the EHS cable through the hole, and terminate the wire's end with the wire-end stopper.

Wedge Grip

by Preformed Line Products (now for EHS and Common grade cables)

From the inventors of the Preformed Dead-End Grip comes this heavy-duty remake of a centuries-old technique for buttoning a wire's end. The Wedge Grip uses tension and a mechanical wedge to grip 7-strand guy wire. The differences in the Wedge Grip and RIGGUY (below) include materials and mechanics. The Wedge Grip utilizes an iron (not aluminum) wedge, and does not require user to splay the wires apart but rather accepts the unaltered wire in the wedge's channel, then the wedge is pulled into a cone-shaped cylinder that is said to deliver 100% of the wire's rated tensile strength under tension. A screw-on cap initiates pressure to keep the wire from slipping between loads. It's a very nice system. The Wedge Grip consists of four parts: the outer cylinder, the cap, and two halves of the wedge. The wedges come in four different sizes depending on cable diameter, while the outer cylinder and cap come in one size only.

He who rejects change is the architect of decay. The only human institution which rejects progress is the cemetery.

Harold Wilson

[Dynamic] TreeSave®

TreeSave is produced exclusively for SHERRILLtree by Samson Rope Manufacturing for customers in search of a dynamic system compatible with invasive or non-invasive anchorage. This product was conceived for the American market based on similar European systems but with a few unique twists. TreeSave® has a built-in dampening core which can be spliced into J-lags and eye bolts. By replacing static steel cable with TreeSave®, both the anchor hardware and the tree receive significantly reduced shock-loading impact during wind events, extending the life and holding power of drill-installed hardware. TreeSave® is also available with non-invasive slings (eye-to-eye style) for those jobs with trees that are known to have poor compartmentalization of wounds.

TreeSave® is easy to splice., It requires no heavy cable cutters, pliers, or even gloves. You simply feed the rope through the eyebolt or sling eye, and then splice the rope back into itself over a common heavy-duty steel thimble.

Cable Only

(longer sizes available)

TreeSave® 10/5 (10mm, 2.5-ton) crotches up to 15.5"

27601	\$152 ⁹⁵	150 ft., 12 lbs.

ECHO Gas-Powered Drill

Portable, lightweight, and powerful!

ECHO drills incorporate heavy-duty gear reduction for power and control, transistorized electronic ignition for easy start, and thick rubber handles for sure grip. The drill's chuck holds up to a 1/2" drill shank. Take production to a new level with ECHO!

Drill with Reverse Gear, 21.2 engine, 8.8 lbs. 20:1 gear case and exclusive reverse gear, 1/2" chuck

NOT AVAILABLE
IN CANADA

10679 **\$449⁹⁹** Echo Gas-Powered Drill

5-Foot Long Timber Bit

Got an aging patient to stitch up? This bit can resurface through most of your biggest jobs! This is the longest bit currently in production. Go slowly, clean the hole regularly, and be sensitive to binding.

**OVER
SIZED**

34095 **\$194⁹⁵** 13/16" by 60" long, 24" flute (for 3/4" rods)

34094 **\$164⁹⁵** 11/16" by 60" long, 24" flute (for 5/8" rods)

32094 **\$176⁹⁵** 13/16" by 40" long, 1/2" shank with 3 flats, 36" flute (for 3/4" rods)

Power Ship Auger Bits

For power drills.

35202 **\$26⁹⁵** 9/16" dia. by 18" long, 12" flute (for 1/2" rods)

14964 **\$74⁹⁵** 9/16" dia. by 29" long, 24" flute (for 1/2" rods)

15019 **\$75⁹⁵** 11/16" dia. by 29" long, 24" flute (for 5/8" rods)

Auger Bits

For power drills. (choose bit 1/16" smaller than your J-lags)

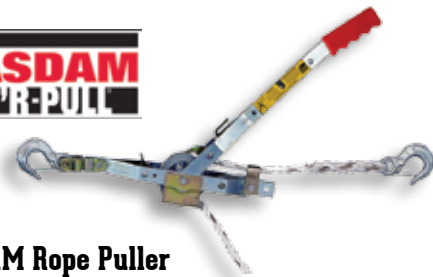

14971 **\$32⁹⁵** 7/16" dia. by 8" long, 6" flute (for 1/2" J-lags)

14972 **\$32⁹⁵** 9/16" dia. by 8" long, 6" flute (for 5/8" J-lags)

Before repairing a split crotch with steel rod(s), it may be necessary to close the wound to create a straight path for the drill bit. This can be done using eye slings and a come-along device above the wounded area. Finally, drill holes in accordance with ANSI A300 (Part 3) guide-lines before installing bracing rod(s). Most recommend starting from the bottom and working upwards to effectively "zip" the fissure closed.

**MAASDAM
POWER-PULL**

CE

MAASDAM Rope Puller

Used for everything from pulling trees to vehicle recovery, tree services find this handy device a real time saver when an extra hand is not available. Other uses include pretensioning lines, stretching fence, bending saplings out of harm's way, and raising loads.

Walks along the full distance of rope without the limitations of most cable pullers.

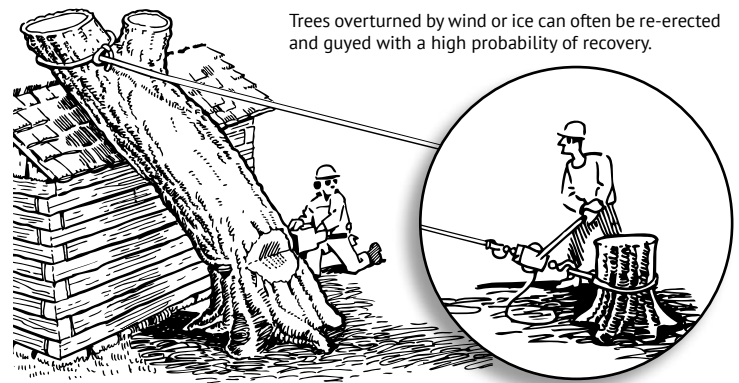

The MAASDAM Rope Puller works best with 3-strand lines such as Tree Master, but will work adequately with solid braid ropes such as Arbor Plex, Tree Pro Red or True Blue. 1,500 lb. capacity. Rope and snap not included.

16071 **\$62⁹⁵** MAASDAM Rope Puller (for 1/2" rope)

33634 **\$46⁹⁵** Replacement Kit

16063 **\$65⁹⁵** MAASDAM 2-ton Cable Puller (not shown) includes 12 ft. of cable

Fence Puller Kit - Great for replacing fence after entering yards with heavy equipment (stump grinders and loaders) or removing trees without destroying fence.

Trees overturned by wind or ice can often be re-erected and guyed with a high probability of recovery.

More Power Puller

Now, a heavy-duty come-along of iron and steel, for the big jobs! The More Power Puller is rugged, yet still portable. This 25 lb., 2 ton capacity puller comes with 20 ft. of 5/16" cable (not 1/4", as is common with other come-alongs), double-stop pawls, and a limited two-year-warranty. This unit features a hollow aluminum handle that is designed to collapse if operator reaches the danger zone, protecting not only against possible mishaps, but saving the life of the equipment as well. Length 17" by width 6" by height 8"; Weight 25 lbs.

16131 **\$248⁴⁵** More Power Puller

**HEAVY
WEIGHT**

ARBORJET EQUIPMENT AND FORMULATIONS

WORK BETTER TOGETHER

Turn to Arborjet for solutions to all your tree and plant health care needs.

Our equipment and formulations are designed to Work Better Together to maximize productivity and provide you with the most advanced solutions on the market. Products like TREE-äge®, Arbor-OTC®, and MIN-jet Iron are all critical options in your toolkit, especially when paired with the power and simplicity of the QUIK-jet Air®.

Visit arborjet.com or sherrilltree.com

©2015 Arborjet, Inc. Important: Always read and follow label instructions. Some crop protection products may not be registered for sale or use in all states or counties. Please check with your state or local extension service to ensure registration status. TREE-äge® Insecticide is a Restricted Use Pesticide and must only be sold to and used by a state certified applicator or by persons under their direct supervision. TREE-äge® is a registered trademark of Arborjet, Inc. In addition to the pests noted on the TREE-äge federally registered label, Arborjet supports a FIFRA Section 2(ee) recommendation for TREE-äge insecticide to control additional bud and leaf and shoot, stem, trunk and branch pests. Please see the section 2(ee) recommendation to confirm that the recommendation is applicable in your state.

ARBORJET®
Revolutionary Plant Health Solutions

QUIK-jet AIR Kit

Simply Productive. Arborjet's new QUIK-jet Air™ is the latest weapon in the war against tree insects and diseases. Its innovative design combines the simplicity of the popular QUIK-jet™ and power of the VIPER Air Hydraulic systems to create a lightweight, easy-to-use injection tool that maximizes productivity and reduces labor time.

Switch it On. The QUIK-jet Air features one-thumb switch operation, precise dose measuring, and air-powered injection in a rugged aluminum body weighing less than 2 pounds. You'll notice the difference when you make the switch and use QUIK-jet Air

PRECISE - Precise dose measuring you can see
EASY - One-finger operation for fast injections
FAST - Injections are faster & smoother than ever
AIR-POWERED - Quick-connect adapter hooks up to air tank for increased productivity
LIGHT WEIGHT - Durable aluminum body weighs less than 2 pounds

QUIK-AIR \$1,799⁰⁰ QUIK-jet AIR Kit

ARBORplugs sold separately. See below.

More kits available at
SHERRILLtree.COM

- 1 QUIK-jet Air device
- 1 Liter supply bottle
- 1 Air tank
- 1 Carrying bag with shoulder strap
- 1 Arborplug setter
- 2 Drill bits (3/8" and 9/32")
- 1 Needle cleanout tool
- 1 Graduated cylinder

- 1 Pair of safety glasses
- 1 Funnel
- ½ Liter of CLEAN-jet
- 1 Training Manual
- 1 Low Pressure Regulator with coil
- 2 Viper Needles
- 1 Allen Wrench - 5/64"

ARBORjet Tree I.V. 2-Pack Kit

Our most versatile injection system. For coniferous and hardwood trees. High volume, low pressure, can be used with mixable products. A perfect starter kit.

- 1 Bucket
- 2 TREE I.V. bottles
- 8 VIPER valve assemblies
- 2 TREE I.V. manifold 4-line
- 4 TREE I.V. stands
- 2 VIPER needle clean-out tools
- 1 Pressure pump
- 1 TREE I.V. toolkit
- 1 Drill bit
- 1 Arborplug setter
- 1 Graduated cylinder
- ½ Liter of CLEAN-jet
- 1 Funnel
- 1 Training manual

ARBORplugs sold separately. See left.

IMA-jet [insecticide]

IMA-jet is a systemic insecticide used to control a variety of insect pests of ornamental or forest trees. Pests controlled include aphids, whiteflies, soft scales, adelgids, gall forming wasps, leafhoppers, lace bugs, mealybugs, psyllids, serpentine leafminers, sawflies, thrips and leaf feeding beetles.

Use IMA-jet as directed in trees in residential, business and commercial areas, golf courses, airports, cemeteries, parks, street trees, playgrounds, athletic fields, commercial forestry production, seed orchard trees, nurseries, and in private, municipal, state, federal, county and local recreational forests.

For optimum results, apply IMA-jet prior to infestation. Also apply when insects are infesting and feeding upon the tree. IMA-jet insecticide moves upward into the tree's canopy from the application sites.

TREE-äge® [insecticide]

TREE-äge® Insecticide may be delivered through Arborjet injection systems into the tree's vascular tissue to assure even distribution and consistent results. Independent university studies have shown TREE-äge to be a very effective treatment of **Emerald Ash Borer** on Ash trees. In these trials, TREE-äge has demonstrated high levels of efficacy and extended residual activity for 2 years of control against Emerald Ash Borer. TREE-äge is now labeled for broad spectrum insect control including **Bark Beetles, Caterpillars, Coneworm, and more.**

The active ingredient in TREE-äge is emamectin benzoate. Utilizing an innovative proprietary technology, the active ingredient molecules are held in a micro-emulsion formulation making the active ingredient miscible in water and able to flow effectively in the tree's vascular system without the use of solvents.

Tree-age is a Restricted Use Pesticide. To purchase this product you must have a valid RUP applicator's license for your state of residence. Before placing your order (phone or web) please fax or e-mail us a copy of your RUP license. You will only need to supply this information on your first purchase. We will gladly keep this information on file for your future purchases of this product. Our fax number is 336.378.1096. If you would prefer to email us this information, you may contact us at info@SHERRILLtree.com

AzaSol [insecticide]

AzaSol is a pale yellow/white, amorphous powder containing 6% by weight azadirachtin. It will instantly dissolve in water to give a solution that is ready for spray application for pest control. AzaSol is non-oil based and highly effective as a powder. Use AzaSol for pre-harvest treatment of fruits and vegetables in case of **sudden pest infestations**. AzaSol is effective on a very wide spectrum of insects and pests as listed on this label.

Use AzaSol on a wide variety of plants as listed indoors and outdoors. When used as directed, AzaSol will destroy targeted insect larvae when they eat sprayed plants, or come in contact with the spray. AzaSol eliminates insects by stopping the insect's growth, and is effective on all insects listed, insect larval stages and pupae.

- Water soluble powder.
- Patented production process.
- Potent levels of azadirachtin.
- Application Method: Trunk Injection, Spray Application, Soil Drench, Chemigation (the process of applying pesticides and fertilizer through irrigation water)

NutriRoot

Patented blend of hygroscopic components including humates, micro-nutrients, surfactants, and humectants designed to attract and retain water and enhance soil conditions for accelerated root development.

NutriRoot provides 8 components to dramatically accelerate root development in trees, plants and lawns. It extracts water from the air and soil and redirects it to the root zone. It provides humates, kelp, and micronutrients as well as NPK for root growth. At transplant it will help with plant survival and during drought it will deliver any available water to the plant.

MINjet Iron [fertilizer]

MINjet Iron is a water-soluble, buffered tree fertilizer designed for tree injection. MINjet Iron contains micronutrients essential to cell wall development and to the photosynthetic process. MINjet Iron injected into trees will make these micronutrients immediately available for growth and development. MINjet Iron helps alleviate **Chlorosis** (yellowing) and promote the development of green foliage with 7500ppm of Iron and 3800ppm Manganese. Works for Iron Chlorosis caused by Iron deficiency.

- Recommended in High Volume for Hardwood Trees with moderate to severe yellowing such as Beech, Cherry, Elm, Eucalyptus, Linden, Oak, Poplar, Sycamore, Tulip Poplar and Willow. (For # of injection sites use DBH"/3)
- Recommended in Low Volume for Conifers, Ornamental and Flowering Trees including Ash, Catalpa, Dogwood, Honey Locust, Live Oak, Magnolia, Birch, & Maple. (For # of injection sites use DBH"/2)
- May be used as formulated or dilute 1 part MIN-jet Iron with 1 to 3 parts water.
- 1 gallon treats 37 trees (10" DBH)

Safari

Insecticide

Safari is a dinotefuran-based super-systemic insecticide that distributes quickly throughout the tree's vascular system, making the tree's tissues poisonous to most pests for up to 1 year

- Best insecticide to use for bark spray application
- Highly effective against numerous pests of ornamental trees including **scale (armored and soft), Emerald Ash Borer, Hemlock Woolly Adelgid, Whitefly, thrips, Japanese Beetles and many more**
- Bark spraying takes less than 2 minutes to treat most trees
- Bark spraying is non-invasive; does not wound trees
- Rapid control- effective control in 1-3 weeks for most pests
- Can also be applied as a foliar spray, a broadcast spray, a soil drench, soil injection and via chemigation

DiPel Pro DF

Biological Insecticide (OMRI listed)

DiPel is the most widely used biological insecticide in the world, delivering excellent control for several types of pests. This Bacillus-based OMRI listed insecticide is registered for use on a variety of ornamentals, and delivers outstanding control of more than 30 species of insects, including tent caterpillar and various bagworms, looper, tobacco budworms and armyworms. Its dry flowable formulation is dust free and easy to measure and mix. DiPel PRO DF is biodegradable and has minimal effect on humans, non-target animals or the environment. Studies have shown beneficial organisms such as earthworms, ladybugs, birds, snakes and honeybees are not affected by DiPel.

DiPel DF is listed by the Organic Materials Review Institute (OMRI) for use in organic production.

BugBarrier effective and POISON-FREE!

BugBarrier is a simple-to-install and non-poisonous approach to effectively trapping and killing a list of insects capable of defoliating full-grown trees. BugBarrier works an entire season to catch canker worms, gypsy moths, ants or similar insects on a hidden, sticky surface that stops them from climbing trees. The product arrives in two rolls. The first is a dense cotton under layer that fills crevices in the bark to detour passage above. The second roll is a sticky and wide band capable of retaining thousands of tree-killing pests during the season. Although most pest movements happen in the spring and fall, check with your local extension service to find out the correct season. Best of all, when your customer sees how effectively this product works, you can expect a call every season!

Features include:

- Easy to install and remove
- Works so well customers will welcome you back annually
- Harmless to people, pets, and animals since it is poisonless
- Traps canker worms in the spring and fall, forest tent caterpillars, gypsy moth larvae, winter moths, ants and most crawling insects.

28782 **\$119⁹⁵** 30 ft. kit

Reliant [fungicide]

Reliant works in three ways:

1. It's a Fungicide: Kills pathogens on contact, in the soil and on the plant.
2. It's a Nutrient: Potassium builds plant health
3. It's a Stimulant: Increases the plant's production of Phytoalexin antibodies that stimulates the plant's immune system against disease.

Reliant is a systemic fungicide which has both xylem and phloem mobility, in that it will move throughout all parts of plants. It will move from plant roots into the newly emerging shoots and conversely from new shoots into the root system. Reliant is absorbed by all plant tissue regardless of where or how it is applied and is directly fungistatic, in that it slows the growth of the disease pathogen and inhibits the formation of new spores by the pathogen.

This very complex mode of action can be simplified into making the plant more "robust healthy, ready to withstand pathogen attack" and environmental stress. Other physiological effects observed after applications of Reliant to various plant species are: bigger blooms, increase in color or intensity of color of both leaves and blooms, initiation of root growth, larger fruit set or increase on fruit set, auxiliary bud break and a very pronounced observable overall increase in plant health and vigor.

PENTRA-BARK®

Bark Penetrating Surfactant

PENTRA-BARK® is a wetting agent, designed for improving penetration through bark of water based basal applications. PENTRA-BARK® may be used in agriculture, horticulture, industrial, and forestry operations. It is designed for fast spreading, uniform distribution and absorption, and can be coupled with most pesticides and fertilizer products.

- PENTRA-BARK® eliminates the need to spray foliage, soil drench, bark inject, or pressure inject into soil.
- Basal bark application
- Easy, effective application
- No drift or chemical trespass
- Proven effective with Fungicides & Insecticides
- For deciduous plants

Arbor Green PRO 30-10-7

A complete fertilizer, Arbor Green PRO 30-10-7 contains high-quality nitrogen, phosphorus and potassium formulated from ureaform and monopotassium phosphate, plus polyamino acid. Arbor Green PRO releases these nutrients, including synthesized organic nitrogen fortified with polyamino acids throughout the growing season. A slower, controlled release rate leads to uniform growth, a lower risk of leaching and greater efficiency of nutrient absorption.

PHC for Trees
Fertilizers

Water-dispersible chemical and biological fertility product. The chemically-based elements meet trees' nutrient needs quickly, while the beneficial microbes sustain fertility over the long term. Applied with soil injection equipment or by soil drench. PHC for Trees is less abrasive to injection equipment, requires less tank agitation, and provides both short-term and long-term continuous replenishment of mineral nutrients in the soil. Comes in Spring and Fall formulations.

27-9-9 (50% slow release) Spring fertilizer: strong Nitrogen heavy fertilizer with a complete micronutrient package, a microbe-based renewable biofertilizer system, and a proprietary soil surfactant specifically selected to promote uniform distribution, improve solubility, and reduce leaching of applied mineral nutrients. 50% Slow Release Nitrogen content keeps nutrients available longer for continuous tree health. This product is an excellent, well-balanced fertilizer that gives trees a strong boost in springtime, when they need Nitrogen the most to grow leaves. Each box contains five 8 lb packs, each 8 lb pack mixes with 100 gallons of water, treats 1,250 square feet.

11-22-22SRN (slow-release nitrogen) Fall fertilizer: a low Nitrogen and high Phosphorus and Potassium content make this fertilizer perfect for the fall, when the trees aren't producing leaves but need to boost their root systems for the winter. This fertilizer contains a complete micronutrient package, a microbe-based renewable biofertilizer system, and a proprietary soil surfactant. Slow Release Nitrogen formula keeps nutrients available for longer, maximizing tree health and lengthening times between treatments. Each box contains five 8 lb packs, each pack mixes with 100 gallons of water and treats 1,250 square feet.

Tree Tech Microinjection

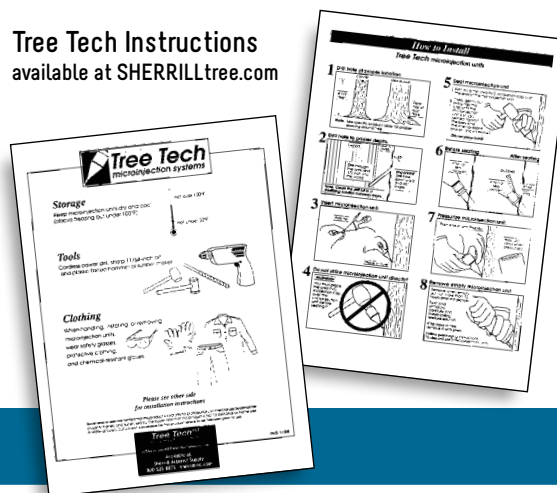

For emergency care!

The Tree Tech™ microinjection unit is a single-dose, manually-pressurized device for administering directly into the vascular system of trees and woody shrubs.

Injection is very simple. Upon professional evaluation that an application is favored, the administrator determines the number of micro units based on the caliper of the plant to be treated. A 1/8" diameter by 1/2" deep hole is drilled at a 45° angle and the canister injected. Uptake is immediate in most cases.

Tree Tech Instructions
available at SHERRILLtree.com

ALL TREE TECH FORMULAS ARE SOLD IN PACKS OF 25

Systrex™ [fungicide w/nutrient]

A systemic fungicide, containing Bayleton®, as well as a fertilizer solution. Systrex™ controls **powdery mildew, leaf blight/spot, and tip blight**, but has been particularly effective in treating conifers and hardwoods suffering from the effects of construction or naturally occurring damage. Not available for shipment to Canada. One every 3" of stem circumference.

25-pack 20467 **\$153⁹⁵**

Dendrex™ [insecticide]

Widely used insecticide for control of aphid, bagworm, birch leaf miner, tent cat, gypsy moth, pine moth, root weevil adults, scales, sawflies, beetles, and others. Each Dendrex™ unit contains 1.5 grams of acephate insecticide. Not available for shipment to Canada. One every 6" of stem circumference. (For beetles apply One every 4" as beetles appear.)

25-pack 19271 **\$126⁹⁵**

Nutri-ject™ 6-8-7 Supreme [fertilizer]

A nutrient solution formulated for tree fertilization. Each microinjection unit contains 12 mL of a balanced solution of nutrients. Not available for shipment to Canada. One every 6" of stem circumference.

25-pack 15144 **\$109⁹⁵**

Vivid II™ [insecticide]

A new biorational insecticidal compound for non-crop trees. Controls **elm leaf and engraver beetles, scales, mites, aphids, adelgids**, and more. Not available for shipment to Canada. One every 6" of stem circumference.

25-pack 18976 **\$142⁹⁵**

ALSA® Propiconazole 14.3 EC [fungicide]

Compare to Alamo®

A broad-spectrum fungicide to aid in control of oak wilt, **Dutch elm disease**, sycamore anthracnose, and other leaf diseases. Not available for shipment to Canada.

25-pack 13371 **\$126⁹⁵**

OTC [bactericide]

Contains Tree Tech OTC systemic antibiotic solution. Oxytetracycline antibiotic solution aids in the control of **fire blight, X-disease, bacterial leaf spot, and decline of crop-bearing peach and pear trees**. Tree Tech OTC also aids in the control of certain other bacterial and mycoplasma-like diseases of forest ornamentals, crop bearing and non-crop-bearing trees, woody shrubs and palms such as ash yellows, fire blight, leaf scorch, wetwood, and lethal yellows in Coconut Palms and lethal decline of Pritchardia Palm. Not available for shipment to Canada. One every 6" of stem circumference.

25-pack 28000 **\$114⁹⁵**

Merit Insecticide [Imidacloprid]

Merit Injectable contains more active ingredient than other trunk injection products (17.1 percent) and comes in 3 or 6 milliliter, easy-to-use, leakproof units. Kills common pests as well as tough-to-control insects such as Asian longhorned beetles, **emerald ash borers**, and **hemlock woolly adelgids**. Check to see if Merit is available for sale in your state at SHERRILLtree.com. Not available for shipment to Canada.

	6 ml	31924	\$164⁹⁵

Nutri-ject™ Iron Zinc [fertilizer]

For macronutrient and micronutrient application in trees and woody ornamental plants. Nutri-Ject 8-8-7 also contains 1.00% Zinc, 1.00% Iron, and .10% Copper. Not available for shipment to Canada. One every 6" of stem circumference.

25-pack 29360 **\$109⁹⁵**

Snipper™ [deflowering agent]

Inject during flower bloom to abort seed production on sweetgum, black walnut and locust, cherry, crabapple, hickory, persimmon, plum, ginkgo, oak, and others. Not available for shipment to Canada. One every 4" of stem circumference.

25-pack 25888 **\$153⁹⁵**

EZ Soak™ 20 Gallon Tree Watering Bag

Improve the survival of newly planted trees, and reduce watering maintenance with the new EZ Soak from SHERRILLtree. Used by arborists, landscapers, and municipalities to provide deep water saturation for approximately 5-9 hours, depending on climate and soil.

EZ Soak is constructed of heavy-duty, reinforced Nylon, with box-stitched handles that won't tear under normal conditions. Unlike single-emitter watering bags, the EZ Soak has two water-releasing emitters, AND an added UV inhibitor to protect from mold, which causes other bags to clog.

The EZ Soak is well-built, affordable solution for providing newly planted trees the water they need. Works best on trees between 1-5 inches in trunk diameter. For larger trees, you can zip two bags together to provide coverage up to a 10 inch trunk diameter.

35966 **\$21⁹⁵** 20 gallon

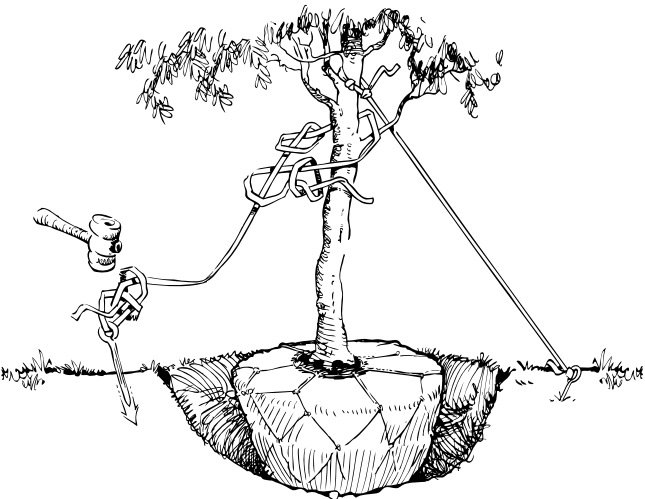

Tree Guying Cable

Tree Guying Cable is a revolutionary new material for staking and guying trees. It is safe, easy to use and less expensive than traditional tree ties. The soft polypropylene materials have an exclusive weave that ensures a rounded edge at all times to help prevent the material from girdling young trees. The 900 lb. tensile strength provides substantial strength for most b&b sized trees. Tree Guying Cable fastens to any stake or anchoring system with traditional knots or nails.

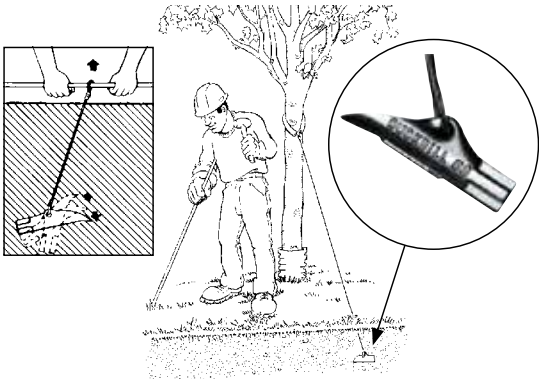

22068 **\$35⁹⁵** 250'

22083 **\$69⁹⁵** 500'

Duckbill® Earth Anchors

Discover the most reliable way to anchor trees and many other objects. Simply drive the Duckbill Anchor into the ground with a drive rod, remove the rod from the ground, and set the anchor for stay-fast holding power in most soils.

AIR-SPADE® 2000 Excavation Tool

Excavate dirt from around roots in minutes with minimal root damage using only compressed air and this truly magical wand. AIR-SPADE® allows rapid excavation of wet or dry soil without the damage caused by picks and shovels. This lightweight, fiberglass gun delivers remarkable results without risk of harming trees and utilities, yet clears great volumes of material with minimal effort. Put one to work in your company and watch it pay for itself in just a few jobs! Requires an air compressor (not included) rated at 175 or 185 CFM (minimum).

- Aeration and vertical mulching
- Root collar excavation
- Radial trenching
- Locating utilities
- Reducing soil compaction

Handle Repair Kit (sold separately)

Includes: 1 Valve stem, 1 Valve seal, 1 spring, 2 valve caps, 2 casting grips, 1 trigger sleeve, 1 Pressure gage, 1 .25 oz container of O-ring lube, and one lanyard and safety clip.

AIR-SPADE® Kit

(includes AIR-SPADE® 2000 Excavation Tool, 45° adapter, 10' X 1" hose and storage case)

The 45 degree adapter is used to change the direction of the air flow so that the operator can work around objects without having to get into an uncomfortable position. The 10' hose is extremely lightweight, up to 75% lighter than standard air compressor hoses, and attaches to the tool at one end and the air compressor hose at the other. The operator throws it over his shoulder, which makes it easier to use the tool for long periods of time without becoming fatigued. The storage case keeps the tool safe and clean and reduces the chance of losing parts. A 20 page instruction booklet is also included with the tool.

Biobarrier® Root Control System

I'm sure we've all seen a sidewalk that has had portions of it cracked and pushed up due to the growth of roots from a nearby tree. Similar effects happen to all sorts of other structures, because there is nothing in place to prevent the roots from causing damage. This is where Biobarrier comes in. Biobarrier is an advanced, long-term root control system that incorporates time-release nodules. When strategically placed in the soil, it prevents structural damage from root encroachment, without causing damage to the roots or tree. Effective life of Biobarrier is 15 years (minimum) or more depending on the location.

Though the ideal times to install Biobarrier are when a tree is first planted or when backfilling, Biobarrier can still be easily installed for older trees. Simply dig a small trench along the structure to be protected and slip the fabric vertically into the opening. Cover, tamp, and rake over. That's really about all there is to it. Plus, the flexibility of the fabric allows you to shape and form the root control system to virtually any configuration.

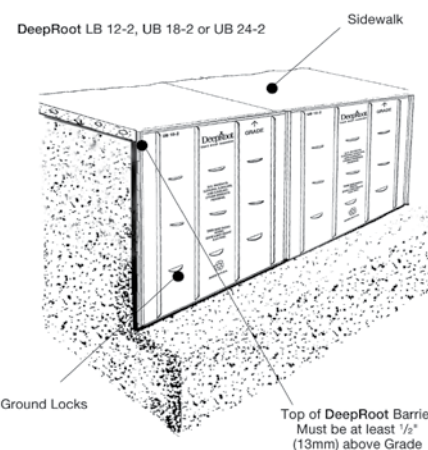

Biobarrier is an excellent root control system for many landscaping situations. Examples include swimming pools, gardens, cemeteries, tennis courts, and building foundations. Biobarrier is sold by the roll.

Root control is another great service that you can offer your customers!

Deep Root® Tree Root Barrier

Another popular method of root control is Deep Root Barriers. They are scientifically designed to prevent tree roots from damaging surrounding hardscapes and landscapes. The barrier is used for either surround or linear applications with trees that will reach as much as 18" to 24" (depending on which size barrier you use) trunk caliper at maturity. Commonly used in conjunction with curb and gutter, parkways and other street tree applications, the two foot long panels come either 18" or 24" high and feature a new integrated zipper joining system that provides for instant assembly, without the use of a joiner strip. The barrier also has a 90° rib to direct roots down and out allowing for full root growth. Anti-lift ground locks prevent the barriers from being lifted by root growth.

22059 **\$215⁹⁵** 26 panels of 18" X 24"

22067 **\$195⁹⁵** 20 panels of 24" X 24"

Shop for the best tree gear on the planet!

ORDERING

Orders placed by 2:00pm est. will ship same business day, Orders placed after 2 p.m. EST, or on weekends and holidays, will be processed the following business day. Please specify the shipping method @ checkout (UPS Ground, Next Day Air etc.)

ORDER TRACKING

If you have provided SHERRILLtree with a valid email address, will we send you a series of emails to keep you informed on the status of your order regardless of whether it was placed on the web or by phone.

SHERRILLtree's Free 2 DAY Shipping Offer!!!

Place an order over \$99* and get Free 2-day Shipping to any location in the lower 48 states.

*Excludes oversize/overweight, special order items

**We do not accept C.O.D's.

HEAVY WEIGHT / OVERSIZED ITEMS

Heavy and Oversized products like cabling, fertilizer, rope reels, PHC liquids, poles & Pro Grade Log Dolly's etc. have a higher shipping cost. Exact shipping cost cannot be determined until the weight is totaled and calculated against your shipping zone. International shipments will require a quote on an individual basis, taking into account the final destination, weight and dimensions of your valuable package.

CREDIT CARD ORDERS

We accept Visa, MasterCard, American Express, Discover or PayPal payments for online or phone orders. In the event of a declined credit card, we will attempt to call you the same day the order is processed. We cannot hold declined credit card orders for more than two days.

SPECIAL ORDERS

Orders for non-stocked items require a special handling fee of \$5.00 (USD), plus freight and payment in advance. Non-inventory items, Special Order items are non-refundable and non-returnable. Cancellations must be made within 24 hours of the order.

PRICES OR PRODUCT CHANGES

Prices, order policies, and product specifications are subject to change without notice at any time. Web & Catalog prices are not guaranteed to match at any given time.

SHERRILLtree Guarantees and Policies

THE SHERRILLtree 150% Price Match Guarantee

If you find a lower competitor price anywhere else on the Internet, or in print on an item with the same MPN (Manufacturer's Part Number), just call one of our Inside Sales Team members and give them the details. We will give you 150% of the price difference, so if we are selling an item for \$200 and you find it elsewhere for \$180, your price with SHERRILLtree will be \$170 (the difference which is \$20 + 50% of that difference which equals \$10, for a total of \$30 OFF our original price). Apologies, but price matching is not applicable on Special Order items and it applies only to USA based Arborist Supply retailers.

FERTILIZER / PESTICIDES

These products can only be shipped into states in which SHERRILLtree is legally licensed. Pesticides shipped to California and Minnesota may be subject to additional state taxes. SHERRILLtree is not able to ship fertilizers/pesticides internationally.

SPLICED GOODS

Spliced goods manufactured by SHERRILLtree have a measurement tolerance range of + or - 5% for stock spliced products and for custom spliced products. You will be required to provide specific details and sign-off on your order before it can be made and shipped to you.

SALES TAX

Sales tax is applied to orders from CT, MI, NC, PA and TN. State and Federal tax laws are subject to change without notice.

CHANGES TO ORDERS

Additions or changes to your original order must be made within one hour of placing the order, otherwise, shipping could be delayed a day. Unfortunately, we cannot ship parcels to a post office (P.O.) box, so please let us know if your shipping address is different from your mailing address.

INTERNATIONAL CUSTOMERS

SHERRILLtree ships products all around the world. Shipping rates and local duties, taxes and tariffs vary widely depending on your individual location. We will provide you with a shipping estimate. Since local regulations change often, please check with your local customs official for the most recent set of shipping regulations.

All additional duties and taxes on international orders must be paid for by the customer. If refused, the customer will be responsible for any duties and/or freight paid by SHERRILLtree Inc., as well as any "abandoned merchandise" charges.

HASSLE-FREE RETURN PROCEDURE!!!!

Free Shipping on **ALL** returns (excluding over-size and over-weight items). If you are not satisfied with a product you have purchased from us, please feel free to return it, **unused and in original packaging, within 30 days** for a full refund of the item. Simply use the UPS "RS" label that accompanied your order. UPS Ground takes 5-7 business days to get your package back to us. Make sure any existing labels are covered and take your return to your local UPS location. If you don't want to use the prepaid UPS return label or if you live outside the contiguous U.S., you can mail your return back to us using the carrier of your choice. Make sure to send it prepaid (no CODs allowed). **No returns will be accepted on items after 30 days. Please note that special order and clearance items may not be returned.**

DAMAGED PACKAGES

When an order is delivered, it is very important for you to inspect the package(s) for damage before you sign for or open the package(s). The package must be reported to shipping carrier as "damaged" to process a claim. Please keep the original boxes for inspection

INCORRECT MERCHANDISE

If you receive incorrect merchandise from our company, please call us within three days of delivery so we can take care of sending you the right product.

We cannot offer a refund or credit for used items or other non-returnable items such as plant health care products, books, videos, DVD's, CD's or special orders.

WARRANTY RETURNS

Returns for defective/warranty claims may require technical inspection before a refund or credit can be issued. Please call our Inside Sales Team for an RMA (Return Merchandise Authorization). If a returned product is determined defective according to manufacturer's warranty, SHERRILLtree will replace, credit or repair the item, 100% at our expense.
