

Thank you for your purchase!

Because of the high melting point of this rope, the core and cover will NOT bond to the cover when it is burnt. As a result, the core tends to “creep” out of the cover. It will be necessary to whip both ends of the cord before climbing with it. Please note the small section of whipping twine included FREE with your purchase.

You should use this to secure the core to the cover. This is done according to the following diagrams.

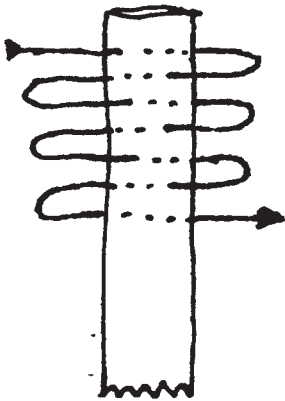

Materials Needed: Whipping twine, Needle, Lighter

1) Thread needle and tie a knot in the opposite end of whipping.

2) Start the whip 1/8 inch below the end of the cord.

3) Whip as follows.

4) Finish by cutting the whipping leaving 1/3 inch out. Burn this down to a ball and flatten.

Thanks again for your purchase, and for choosing SherrillTree as YOUR tree supply experts.
